

Energy Policy

Energy is becoming a preponderant factor for companies. With that in mind, Associated Steel Industries Ltd. (A.S.I.), of Riva Group, has decided to commit to continuous improvement of its energy performance for all its industrial and commercial activities. This process guided by ISO 50001 Standard (Energy Management System) aims at improving our control over our energy consumption and our environmental impact. The implementation, running and certification of our Energy Management System according to the applicable requirements are A.S.I.'s top priority. We will ensure that the required information and resources will be available to every co-worker.

- A.S.I. COMMITMENTS

- Get to know better our significant energy consumption sources by developing an adapted measuring and monitoring plan;
- Raising awareness and train every co-worker while assuring proper access at all time to the necessary resources and information for an efficient and rational use of energy;
- Continuous improvement of the energy performances of our equipment and installations by supporting low energy purchases and services;
- Integrating energy performance notions in our investments;
- Respecting legal, ISO 50001 Standard and all other applicable requirements;
- Follow-up on the improvements of our company's energy performance with adapted indicators in a continuous improvement process.

Together let's mobilize our energy to make our company progress.
