Integrated ISO 9001-14001-45001-50001 policy

As a recycling industry with over 50 years' experience, our vision is simple and straightforward: to continue moving forward in scrap metal recycling in order to give a second life to non-renewable resources and reduce our carbon footprint, while being mindful of the environment, employee health & safety, energy efficiency and continually delivering quality products. Applying best practice in terms of environment, health & safety and quality is an ongoing challenge for our industry, and the Director of our organization is responsible and committed to establishing a management system to achieve our objectives.

This initiative, structured by ISO 9001 - 14001 - 45001 - 50001 standards (Quality / Environment / Health & Safety / Energy Management System), has the global objective of achieving excellence in terms of product quality, while reducing our environmental and energy impact, and considering the safety of our employees. Obtaining certification and applying the standard are priority goals for the company, which is committed to providing all employees with the necessary information and resources.

A.S.I.' commitments

- Meet stakeholder requirements, including customer and product requirements, as well as voluntary requirements defined by our organization;
- Promote customer satisfaction through quality management;
- Aspire to continuous improvement in our quality programs and performance;
- Reach environmental excellence by identifying and implementing best environmental practices;
- Plan investments with the environment in mind, targeting the best available technologies that are economically viable; Minimiser l'exposition aux risques environnementaux pour notre personnel et pour les communautés vivant proche de notre site d'exploitation ;
- Minimize exposure to environmental hazards for our employees and for the communities living near our operating site;
- Encourage all employees to participate in the OHS program and provide adequate procedures, training and equipment;
- Make employees accountable for following procedures and working safely;

Integrated ISO 9001-14001-45001-50001 policy

- Improve safety measures to provide an injury- and accident-free workplace;
- Gain a better understanding of significant energy consumption items by developing an appropriate measurement plan;
- Raise awareness and train all company staff in the efficient and rational use of energy;
- Continuously improve the energy performance of equipment and facilities, in particular by encouraging the purchase of energy-saving products and services;
- Integrate the notion of energy performance into investment decisions.

These objectives are part of a perspective of credibility and reliability in our operations and products, guaranteeing a healthy, safe and energy-efficient working environment.

Let's get together to promote quality, the environment, health & safety and energy within our company!
